## 5.0 SECTION V -TERMS OF REFERENCE

### TERMS OF REFERENCE FOR PROVISION OF FEASIBILITY STUDY FOR EXPANSION OF ELDOWAS

---

#### 1. Introduction

Our client Eldowas seeks to improve the transmission capacity of Chebara - Kapsoya transmission mainline to be able to evacuate the full design potential of the treatment works of 28,000 m<sup>3</sup>/day and determine the capability of the treatment plant to treat the 34,000m<sup>3</sup>/day maximum outflow from the dam. The overall objective of the project is to increase water supply from Chebara Treatment Plant to Eldoret Town and its environs. This is envisaged to entail the improvement, rehabilitation of existing facilities and/or construction of new facilities to ensure the adequacy of supply commensurate with the projected demand requirements from existing and potential customers, including the section of the urban community currently not serviced by our client. They are seeking financiers for the around Kshs. 700 million projects.

#### 2. The Assignment

The feasibility study shall mainly be on the ability of the client to payback the requested funds and the expected hurdle return.

Consultant would have to assess the various risks involved, including political risks, regulatory risks, technical risks, commercial risks, financial risks and foreign exchange risks if applicable.

The Consultant shall consider the merits of the various private sector participation options while taking into account the technical, financial, economics, commercial, and regulatory situation prevailing in the water and sewerage sector. At a minimum, the Consultant would have to carry out the following activities and utilize their results in comparing the various private sector participation options.

- Review all existing reports, business plans, studies and documentation regarding the proposed water supply improvement project.
- Highlight any information gaps present.
- Carry out a desktop assessment of the water market through the review of existing studies, demand and population projections, and sales data.

Based on these reviews and comparison with other towns in Kenya with well managed water supply and sanitation services, recommend realistic consumption statistics per category of consumer. The review should be concluded by a forecast of demand and water sales for 15 years post project completion and an identification of key parameters of the commercial and pricing policies that could influence them. If the realistic consumption is lower than current consumption statistics, the Consultant should investigate this in relation to production, unaccounted for water and leakage/wastage data, and recommend plans to increase consumption and reduce wastage patterns to the realistic projected levels.

### **Investment Plan:**

- a. Review Eldowas proposed investment in water production, transmission, and distribution; wastewater facilities, treatment, on-site sanitation servicing facilities taking into account the demand assessment above. This should include improvements (e.g. unaccounted for water) to the system to increase existing supply capability prior to major capital works to increase production capacity.
- b. The Consultant should investigate and propose realistic financing instruments and sources which may be possible, in relation to the private sector participation options being considered. This include but not limited to Development partners and Donors, private equity, commercial debt in a 'concession', public or concessionary financing in a 'lease' etc. This would be done in conjunction with the financial analysis of, and assessing the cash generating capacity of Eldowas operations.
- c. In particular, the Consultant shall analyse the ability of Eldowas to fund repayments, rehabilitation, maintenance, and extension of distribution channels, from internal cash generation.
- d. The consultant shall advise the private sector investor on how best to ringfence revenues, and guarantees for repayments to investors.
- e. In considering the financing instruments, the Consultant should take into account the activities of the various development finance institutions or impact organisations that may be active in the water and sewerage sector in Kenya, including coordination for infrastructural development works.

### **Legal and Regulatory environment**

- a. Review of the legal structure of Eldowas in relation to its establishment statutes, its shareholders, Uasin Gishu County Government and the preferred institutional arrangement. If required, the Consultant will make recommendations of the required changes or amendments to the legal framework/statutes to accommodate the recommended private sector or institutional investor participation option.
- b. Confirming all approvals and licenses required for operations of the entities;

### **Financial:**

- a. Develop a financial model for the proposed project. This would include the financing of and projected revenue from the proposed the investment program and a review of the proposed cost of the water

distribution system. Scenarios for various financing methods and their implication shall be explicit in the model.

- b. Utilize the financial model to consider the attractiveness of various private sector participation option. This would include the utilization and estimation of forecast parameters (unaccounted for water unit operating costs, accounts receivables, etc.) using well run water supply services operations in Kenya as the benchmark.
- c. The Consultants would present a fully developed financial model and forecast for the recommended preferred private sector option to demonstrate the economic and financial viability of the recommended option through an Internal Rate of Return (IRR).

### **3. Reports and Review**

- a. Upon completion of the above activities, the Consultant will prepare and submit a complete draft report to the Client.
- b. The draft report will then be reviewed, and comments will be provided to the Consultant. The Consultant will then review and revise the report based on all comments received.
